Email Marketing Campaign Report

StudyNest Product Launch — a three-email sequence

Digital Marketing Track | Prepared by: Sadhanala Nischay Prasad | October 2026

1. Task Overview

Task: Design a basic three-email campaign for a fictional product launch.
Objective: Understand email marketing fundamentals.
Tools: Mailchimp, Brevo, Google Docs.
Deliverables: Three email drafts, subject lines, preview text, CTAs and the email sequence.

2. The Fictional Product

StudyNest is a fictional AI study planner for college students. A student uploads their syllabus and exam dates, and the app turns them into a realistic day-by-day study plan with spaced revision reminders and a weekly progress view. It has a free plan and a paid Pro plan.

Target audience: Indian undergraduate students (18–23) who signed up on the pre-launch landing page. They are busy, mobile-first, and wary of anything that sounds like hard selling.

Campaign goal: Turn pre-launch subscribers into active sign-ups during launch week.

3. Campaign Strategy

Following the hint *"give each email a different purpose"*, each email moves the reader one step along the funnel:

#	Purpose	Funnel stage	Send time
1	Teaser — spark curiosity, grow waitlist	Awareness	Day 1, Mon 10:00 AM
2	Launch — explain how it works	Consideration	Day 4, Thu 10:00 AM
3	Social proof + gentle deadline	Conversion	Day 8, Mon 6:00 PM

Tone: Following the hint *"avoid excessive promotional language"*, the copy is written like a note from a person rather than an advert: no ALL-CAPS, no stacked exclamation marks, no "BUY NOW / LIMITED TIME!!!" phrasing, and spam-trigger words (free!!!, guaranteed, act now) are avoided. Each email has exactly one CTA.

4. Email Sequence

Subscribes on landing page → **Email 1: Teaser** (Day 1) → wait 3 days → **Email 2: Launch** (Day 4) → wait 4 days → check: signed up? → Yes: exit sequence (move to onboarding emails) / No: **Email 3: Social proof & reminder** (Day 8).

Sending times were chosen around a student's day: a mid-morning slot for the first two emails, and an early-evening slot for the final email, when students are typically planning the next day.

5. Email Drafts

Email 1 — Teaser

Element	Content
Purpose	Awareness: build curiosity and grow a waitlist before launch
Subject line	Your study plan is about to get smarter
A/B subject	Something we've been building for exam season
Preview text	A quick look at what we've been building for students like you.
CTA button	Join the waitlist
Audience	Full subscriber list (students who signed up via the landing page)

Exam season shouldn't start with a blank page

Hi [First Name],

If you've ever opened your syllabus, felt overwhelmed, and closed it again — you're not alone. We heard the same thing from hundreds of students, so we started building something to help.

It's called **StudyNest**: a study planner that reads your syllabus and exam dates, then breaks everything into small daily tasks you can actually finish.

We're opening it up next week. If you'd like to be among the first to try it, join the waitlist below — it takes about five seconds.

Talk soon,
Ananya from the StudyNest team

[Join the waitlist]

P.S. Waitlist members get first access and a short onboarding guide.

Email 2 — Launch

Element	Content
Purpose	Education: announce the launch and show how the product works
Subject line	StudyNest is live — here's how it works
A/B subject	3 ways StudyNest turns a syllabus into a plan
Preview text	Three features that turn a messy syllabus into a daily plan.
CTA button	Try StudyNest free
Audience	Full list (waitlist members get it 1 hour earlier)

StudyNest is live

Hi [First Name],

Today StudyNest is officially open. Instead of a long list of features, here are the three things it does best:

1. Syllabus to schedule. Upload or paste your syllabus and exam dates. StudyNest builds a day-by-day plan that fits around your classes.

2. Smart revision. Topics you mark as difficult come back for review at the right intervals, so you revise before you forget.

3. Progress you can see. A simple weekly view shows what's done and what's next — no guilt, just a clear picture.

Setting it up takes about 10 minutes, and the basic plan is free.

Happy studying,
Ananya from the StudyNest team

[Try StudyNest free]

P.S. Have a question? Just reply to this email — a real person reads every reply.

Email 3 — Social proof & reminder

Element	Content
Purpose	Conversion: share early user stories and a gentle deadline for the early-access offer
Subject line	How Priya planned her semester in 10 minutes
A/B subject	What our first 1,000 students learned
Preview text	Real stories from our first week, plus a quick reminder about early access.
CTA button	Claim 3 months of Pro
Audience	Subscribers who have not signed up yet (exclude existing users)

What students did in week one

Hi [First Name],

In the first week, over 1,000 students set up their plans. We asked a few of them how it went:

“I put in five subjects and my exam dates, and I had a full plan before my chai got cold.” — Priya, B.Com, 2nd year

“The revision reminders are the best part. I stopped re-reading chapters I already knew.” — Rahul, B.Tech, 3rd year

A quick note: students who sign up before **Sunday, 11:59 PM** get 3 months of StudyNest Pro at no cost. After that, the free plan stays free — this just adds the extras.

If it's not the right time, no worries at all. We'll be here when exams come around.

Cheers,
Ananya from the StudyNest team

P.S. Already signed up? Thank you — you can ignore this email.

6. Subject Line & Preview Text Approach

Subject lines are kept under 50 characters so they are not cut off on mobile. Each one uses a different hook: curiosity (Email 1), clarity / “how it works” (Email 2) and a human story (Email 3). Preview text adds new information instead of repeating the subject, so the two lines together act as a two-line pitch in the inbox. An alternative subject line is included for each email to run an A/B test on a 20% sample before sending the winner to the rest of the list.

7. Building it in Mailchimp / Brevo

1) Import the subscriber list (CSV) into an Audience / Contact list and tag the waitlist members.
2) Create a **Customer Journey** (Mailchimp) or **Automation** (Brevo) triggered by the “launch-list” tag.
3) Paste each HTML template from the repository into a *Code your own* email, set the subject and preview text.
4) Add delays (3 days, then 4 days) and a condition “has not signed up” before Email 3.
5) Send test emails to Gmail and Outlook, check mobile rendering and links, then activate.
Merge tags: Mailchimp uses *|FNAME|*; in Brevo replace it with {{ contact.FIRSTNAME }}.

8. Success Metrics (KPIs)

Metric	What it tells us	Target
Open rate	Subject line + preview text quality	35%+
Click-through rate	Body copy + CTA effectiveness	4–6%
Conversion rate	Sign-ups from email traffic	10% of clickers
Unsubscribe rate	Frequency / relevance check	Below 0.5%

Targets are planning benchmarks for a warm, opted-in list; actual results would be compared after sending.

9. Key Learnings

• A sequence works best when every email has one clear job and one clear CTA.
• The subject line earns the open, the preview text supports it, and the body earns the click.
• Helpful, plain language builds more trust than hype — especially with a student audience.
• Segmentation (removing people who already signed up) keeps the last email relevant and lowers unsubscribes.
• Every marketing email needs an unsubscribe link and a clear reason the reader is receiving it.

Note: StudyNest, its URLs, users and testimonials are fictional and were created for this learning task.
